Detroit Diesel Performance Upgrade

Since the initial release of the **Detroit DD5 & DD8** engines, Daimler has upgraded the fuel map to enhance the low-end torque and performance of the first generation of our new innovative diesel engines.

This upgrade is being handled as a **Field Service Campaign** at no cost. We have already reprogrammed several units and the response from the drivers has been very positive.

Districts with these units will be receiving the campaign shortly. When you receive it, call and schedule the reprogramming.

For the latest repair techniques, installation advice or general questions or just to keep your Thomas Bus running at its peak performance feel free to call Henry:
